

## Does The Dishwasher Work?

Did you know that if the soap dish door does not operate...the dishwasher is basically useless. Yes, that's right!

This seemingly simple defect most people consider minor and tend to over look, can render a dishwasher ineffective in its ability to properly clean the dishes.

Here's the scoop - - the open soap dish is a pre-wash dispenser, the soap dish with the cover is the main wash soap dispenser, therefore, if the main soap dish door does not close or is missing...the soap is washed away before the main wash cycle. Or, if the soap dish door does not open, then the soap is not properly dispensed for the main wash.

Many people like myself rely on a dishwasher to clean and disinfect the dishes. If the soap dish door is inoperable...this doesn't happen.
